## NC BROADBAND INITIATIVE SUMMARY TO DATE FOR BURKE COUNTY

- There are 1024 inquiries in the NC Broadband database as a result of the public outreach performed by the County. This is the best response for any County since we started collecting this data.
- What we hope to accomplish is to demonstrate to providers 1) the Burke County Broadband infrastructure identified in the County Telecommunications Inventory performed by ECC Technologies along with 2) the County assets that staff has identified (Towers etc.) and 3) the survey addresses.
- This will be done through a GIS map that will identify the items in layers so that providers can use this tool to see demand as well as where potential internet backhaul is, and where the County may be able to help with lowering deployment costs and the overall investment of market entry. The map will be accompanied by a spreadsheet listing the individual addresses and contact information (where provided by the citizens) of the 1024 citizens that expressed an interest in no longer being unserved or underserved.
- Next steps as of today are to meet on the County assets (Oct 1, 2014) and then have the GIS specialists from NC Broadband and the County work together to take the layers created and develop the map which should not take long.
- Once the County is comfortable with the information, I will contact all of the existing and potential last mile and middle mile providers and set a date for a meeting to share all of the information.
- Equipped with the demand data and the infrastructure, the providers can then determine deployment strategies and communicate those along with any needs that the County can help with to me and the County.
- Informal discussions have already taken place and there has been interest shown by potential providers.
